Orlando Switching Station Outage

24 May 2024

16h30

City Power is aware of a widespread outage affecting customers in various parts of Johannesburg. The outage is caused by a broken 88kV jumper at the Orlando Switching Station, which feeds multiple substations, particularly in the south of the city.

Our team is on site to kick-start the process of repairing and ultimately restoring supply.

The following substations and areas they supply have been affected:

- Hursthill substation
- Eikenhof substation
- Mondeor substation
- Industria substation
- Pennyville substation
- Mayville substation
- Nirvana substation

This outage unfortunately affects operations at the Rand Water board. Eikenhof substation which feeds one of the Rand Water facilities is among a list of substations that are off. City Power is in contact with the management of the Water Board along with Joburg Water.

We urge customers to remain calm and not log calls as the team is already on site working on plans to restore supply.

We apologise for the massive inconvenience caused. Estimated time of restoration will be communicated in the following updates.
